

**Collins  
Aerospace**

17 Jul 25

Cycle 2508-01

**\*\*NOTICE OF REGION COVERAGE CHANGE\*\***

**To: Subscribers to the Obstacle V2 Databases**

**From: Aeronautical Database Services**

**SUBJECT: Obstacle V2 Region Coverage Changes and Removal of Natural Obstacles**  
**Cycle 2508 Release Date: Wednesday, 30 July 2025**

**Overview**

Due to avionics memory limitations and the continual growth of the amount of data in the obstacle database, Collins will be removing natural obstacles from the V2 database and condensing regions.

**Detail**

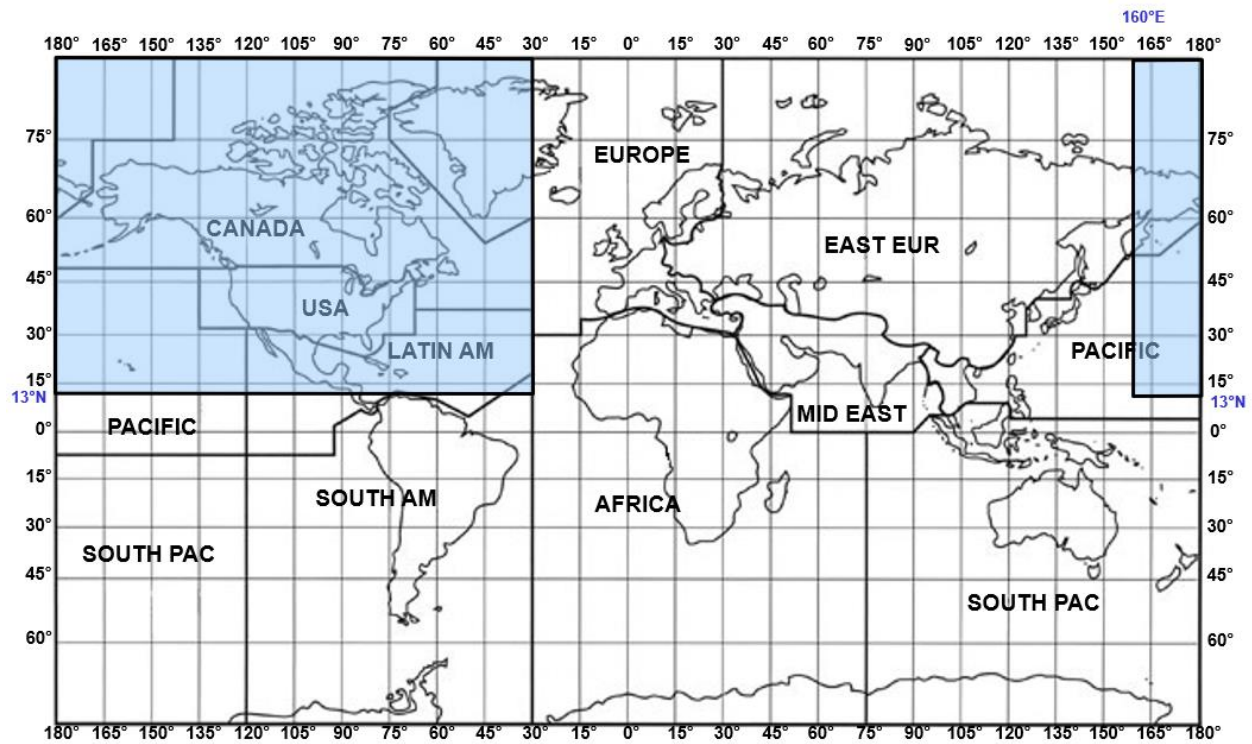

Natural obstacles will be removed from databases; this will condense all North American databases into one region, "Obstacle V2 North America" starting in cycle 2508. The South Americas and Europe Asia Pacific database coverages will not change however natural obstacles will be removed from these databases as well to allow for continued growth in the regions.

Effective **Wednesday, 30 July**, customers who use any North American V2 database will only need to load the ObV2N database.

Operators should review the coverage region maps on this alert and load the appropriate database that includes your intended area of operation.

If you have questions regarding this coverage change, please contact the Aeronautical Database Services team at [collinsdatabasetech@collins.com](mailto:collinsdatabasetech@collins.com).

The updated coverage map as of Cycle 2508, for **OBV2S North America** region is shown below.

Obstacle v2 – North America
