

VHF-4000(E) Replacement Part Numbers

Ref. No. 2011-102M

Pub Date 05/2017

Rockwell Collins offers a new series of VHF-4000(E) part numbers as form and fit replacements to the current part number series that will be discontinued.

Due to demand for technology replacement and obsolescence of key hardware components, the current series of VHF-4000(E) transceivers are being discontinued and will no longer be available October 1, 2011. The new part number series is being introduced as a form, fit and function replacement and is available immediately.

The new versions of the VHF-4000(E) transceivers are interchangeable with existing VHF 4000(E) hardware. An FAA Letter of One-Way Equivalency has been requested to approve the new status as direct replacement for existing versions in existing installations. An AMLSTC has been requested.

Orders for the new part number series will be accepted immediately with deliveries to start on or before October 1, 2011.

The current part number series of units will continue to be supported in the field for repair on a 'parts available basis'.

The new VHF-4000(E) transceiver extends the long tradition of dependable performance and high integrity of Rockwell Collins VHF radios.
