Collins Portable Access Software (CPAS) Support Discontinuance

You rely on your aircraft to depart on-time, every time, and you need a reliable method to keep you aircraft's databases up-to-date.

At Rockwell Collins, we strive to provide you with the components, software, and service that you need to keep your aircraft operating reliably. As Microsoft continues to release new operating systems, Rockwell Collins has made the decision not to support Collins Portable Access Software (CPAS) past the Windows XP/Windows Vista/Windows 7 operating system.

We will continue to provide CPAS technical and support services for laptops running Microsoft Windows XP/Windows Vista/Windows 7. You may continue to use CPAS on Windows XP/Windows Vista/Windows7 laptops, however Rockwell Collins will no longer:

> Provide support for CPAS running on laptops after Windows 7

> Publish updates or revisions to technical publications

> Provide support for obsolete software, engineering reviews, or modifications

Collins Portable Access Software Discontinued Part Number

Software Type	Discontinued Part Number
CPAS-3000	810-0032-xxx

Rockwell Collins recommends that you upgrade your aircraft with one of the following options:
> Aircraft Information Manager (AIM) Wireless Dataloading
> Database Unit DBU 5010E
> Portable Dataloader PDL-5001

AIM WIRELESS DATALOADING

To make updates to your aircraft as fast and convenient as possible, Rockwell Collins now offers a solution that delivers your FMS Navigation Databases and IFIS Charts automatically to your aircraft using wireless data transfer. Our Aircraft Information Manager service securely stages your updates to the Information Management System (IMS-3500) in only minutes. For more information, please refer to Marketing Bulletin IMBRS-110631.3M Rockwell Collins Ascend Aircraft Information Manager – Pro Line 4 and Pro Line 21™ and Pro Line Fusion.

DBU-5010E

By installing the Database Unit (DBU)-5010E, you will be able to use a common USB memory stick to decrease the time you spend updating IFIS charts and FMS navigational databases. You will be able to update multiple databases simultaneously in 25-30 minutes from any personal computer with an internet connection and a USB port. For more information, please refer to Marketing Bulletin BRS-110091.5M DBU-5000/5010E and PDL-5001.

PORTABLE DATA LOADER PDL-5001

The PDL-5001 is a reliable method for regional airline operators to transfer data to their fleet. The PDL-5001 is a portable dataloader that connects to the data plug on the aircraft and updates the aircraft's FMS navigational databases in 25-30 minutes. For more information, please refer to Marketing Bulletin 2012-098M Portable Dataloader PDL-5001.

We believe that these actions are necessary to keep your aircraft flying economically in today's complex airspace and demanding operational environment.

For additional information on any of these products, please contact a Rockwell Collins Authorized Dealer.
